

THE SEED OF THE UNIVERSE
Chapter Seven
The First life

The first life on earth was thought to be algae. Algae can live off air and water, so its food was there. With nothing to eat the algae, it multiplied and filled the seas.

After that, algae were abundant. Then the creature that could live off algae could survive. The eggs hatched and with nothing to eat the creature, the creature filled the seas living off algae. Once the creature was abundant, another creature, that could live off the creature that eat the algae could survive. The eggs hatched, and the creature filled the seas with nothing to eat it. It lived off the creature that eat the algae. The process continued up the chain of life till all the creatures were in the sea water and others (or their eggs) migrated on land. I did a lot of these illustrations when I was airbrushing T-shirts and portraits at John's Pass in Maderia Beach Florida. When I was airbrushing this picture below, I looked up

and a lady was smiling at me. I jokingly said, "Our ancestors". She smiled back and said, "Your ancestors".

THE FIFTH PERIOD OF TIME

Genesis 1:21 ... And God created great whales and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind: and God saw that it was good.

Notice the word Whale. The KJV translators didn't know about dinosaurs. From the Hebrew text,
Gadowl= long, loud, mighty, proud thing
Tanniyn= a marine or land monster.
To our generation, that would be a dinosaur.

Genesis 1:21 was written about the period of time that the dinosaurs filled the earth. Therefore, we can safely believe that the writer (Moses) was writing about dinosaurs. Moses was inspired by God but could have known about the dinosaurs. He was educated by the Egyptians with the finest schools on earth at that time. He was like a prince because the Princess raised him and give him the finest of everything that she could give. There's no telling what all the Egyptians knew during the days of Moses. Moses could have also recorded his books of the Bible and after his death, the scribes could have copied them into Hebrew and eventually, added them to the Hebrew Bible.

The King James translators could have had no idea what dinosaurs were. Therefore, they translated the Hebrew word Tinnium, meaning a land or sea monster, by using the English word whale.

THE SIXTH PERIOD OF TIME

Genesis 1:27 ... So God created man in his own image, in the image of God created he him; male and female created he them.

Genesis 1:28 ... And God blessed them, and God said unto them, be fruitful, and multiply, and replenish the earth ... (etc)

Adam in Hebrew means a man of low degree. Science called him a Neanderthal. The man named Adam with the wife named Eve did not come along till after the 7th day. God called him lysh. lysh in Hebrew means a man of high degree.

The next species after the cattle and beast of the earth was mankind. After reading about Adam and looking up the definition of the word, I found that it was a Hebrew word that means a man of low degree. Right away, I thought about the bones of cave people that have been found by science over the years. The First

chapter of Genesis says that during the sixth period of time, God created both male and female and told them to multiply and fill the earth. In my understanding, he was not talking about the Adam with the wife named Eve, he was talking about the first people that were known as the beasts of the field. They did not know right from wrong so therefore they were considered as beasts instead of humans. They did as animals did and were called a merry multitude in some of the definitions. The Bible says before the law was given to man, sin was in the world, but sin was not imputed before the law. In my understanding, God just let the cave people run free. Then God rested on the sabbath day (Seventh period of time) which could have lasted for thousands or maybe millions of years. After the sabbath, God worked with the man that we know as Adam and eventually, Adam became a living soul. This was not just any man of low degree, this man Adam just happened to be the great, great, great, etc. grandfather of Jesus Christ. He was mentioned in the lineage of Mary the mother of Jesus in the book of Luke. This was where the blood line started that Jesus was born from.

So, ... to my understanding, Adam and Eve were not the first two people on earth, they were the first two people that could tell right from wrong. They are what science called the Cro-Magnon people. After Eve was taken from Adam, God changed Adams name to Iysh. Iysh, is a Hebrew word that means a man of high degree. All of Adams kids were called Iysh also.

To back this up about the cave people, I used the scriptures that tell about Cain, the son of Adam and Eve. After Cain killed Abel his brother, he had to run for his life. Who was he running from? Adam and Eve would not have harmed him. They had an unconditional love for him. He was running from the Neanderthal people that lived all around him. They were out to kill him because he killed his own brother. Cain went to the land of Nod, East of Eden. There he took a wife and had a child. Then he built a city and name it after his son. ... Now answer this? ... Where did he get the people to help him build a city, and also, to populate it. The Neanderthals that lived in the land of Nod, that's where.

Now let me ask my favorite question. How did the writers of the Bible that lived 3500-2000 years ago know what to write about the creation? All that they could see was the night sky and the sun and the moon. The earth that they stood on

appeared flat to them. ... Answer ... They were inspired by God just like the Bible teaches. God was the only one that knew how the universe and life was created, yet the Bible is scientifically accurate. God was also the only one that knew about what went on with Cain in the land of Nod. This shows that the writers were inspired by God to write what they wrote. So, ... for the people that think that they need evidence, in order to believe, you have it within the ancient Hebrew and Greek text. You also have it in nature if you study it close enough. You also have it within the design of the living cell.

10-13-19, update, ... Don Batten wrote an article on the parts of a living cell and how facts doesn't fit with the Scientific theory of evolution. You need to go to the website of Creation.com to see his full article. I promise that you won't be wasting your time.

<https://creation.com/origin-of-life>

Some say that if you could pull out a string of the Microscopic strand of DNA, out of a living cell, it would be 10 ft. long and the information would fill a 50-page book. Science has no idea of the origins of the laws of Physics. They don't know that they are Truth which is a part of God. Some of the other parts of God are Love and the Positive way.

Science tries to say that the scientific theory of evolution is a fact. They teach it to our kids in school. How can they call it fact when they don't even know the origins of the laws of Physics which they have to have before anything solid can exist? Chance can't produce information and the DNA in each cell must be programmed to create the chain of life. The laws of physics are the understanding of how nature works. Nothing can even move without obeying those laws. They have been proved to be true and the Truth is a part of God. The people of the world need to know what is being taught to their kids in school, then bring it to a screeching halt.

The man who wrote this article is a Christian man and also a scientist. Science doesn't want to accept the Bible as a part of science when it is loaded with scientific facts. It was also written 3500 to 2000 years ago when mankind didn't know what was in the universe, yet this book shows that they described the

creation accurately. They also described the creation of life accurately as God being the creator instead of chance.

Cells

How did life begin? Explaining the origin of life by solely physical and chemical processes is proving to be extremely difficult.

What is it that we have to obtain to produce a living cell? A living cell is capable of acquiring all the resources it needs from its surroundings and reproducing itself. The first cell had to be free-living; that is, it could not depend on other cells for its survival because other cells did not exist. Parasites cannot be a model for 'first life' because they need existing cells to survive. This also rules out viruses and the like as the precursors to life as they must have living cells that they can parasitize to reproduce themselves. Prions, misshaped proteins that cause disease, have nothing to do with the origin of life because they can only 'replicate' by causing proteins manufactured by a cell to become misshaped.

The first things needed are the right ingredients. It's bit like baking a cake; you can't make a banana cake if you have no bananas or flour.
