

THE SEED OF THE UNIVERSE

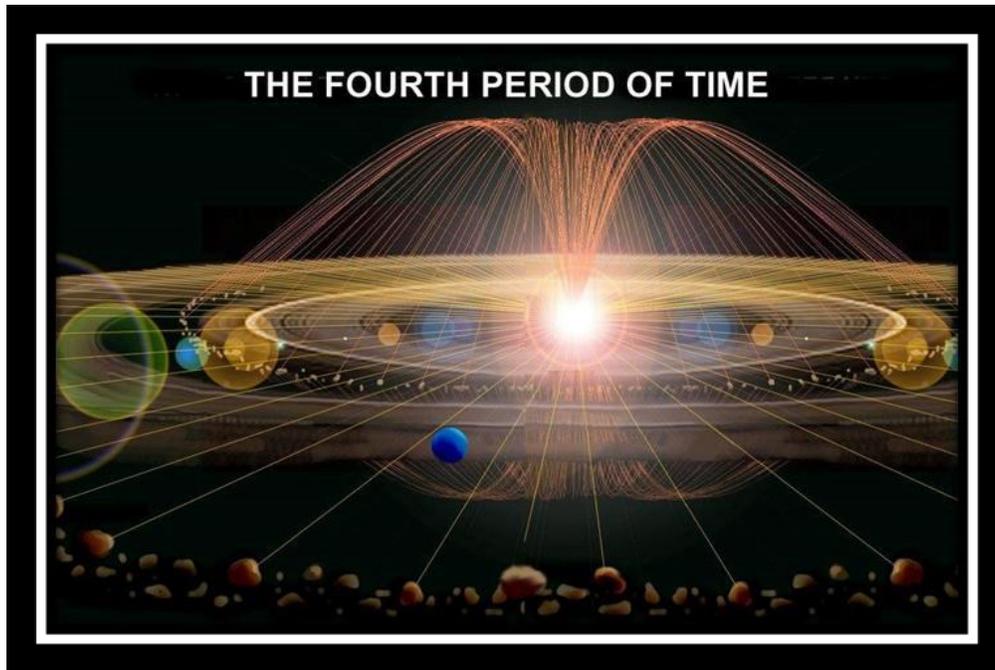

Chapter Six

The Sun and the Moon

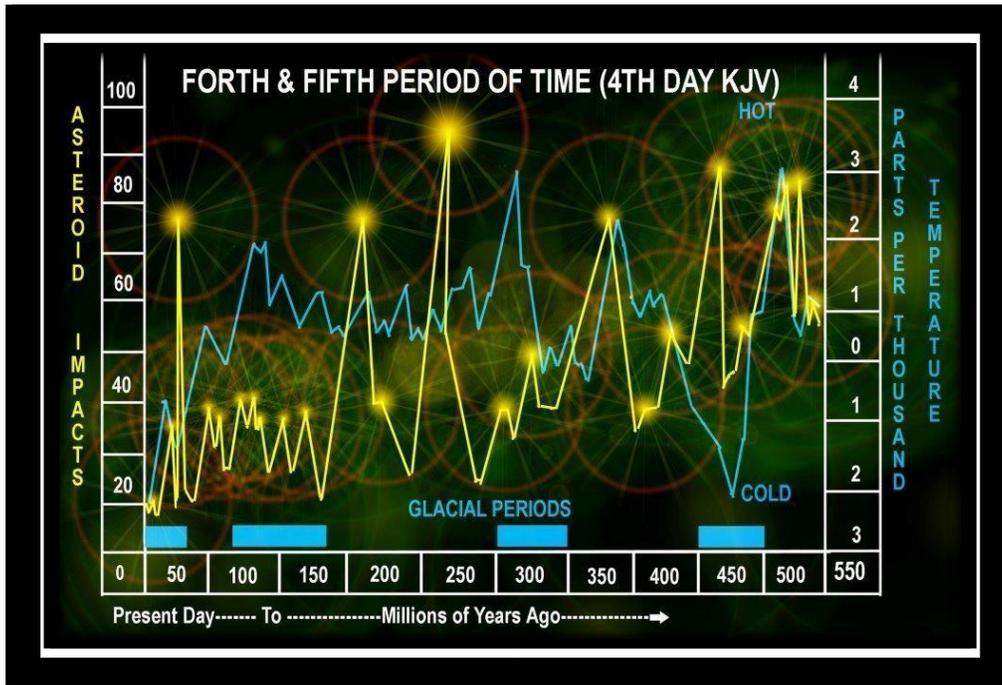

Then it happened! ... The sun got too large to hold its own weight and nuclear fusion set in at its center. The sun had a solid core that can be compared to a welder welding two pieces of steel together. If the bead of the weld is kept clean, the fusion process will go smooth. It's when the welding bead hit's a clump of dirt that hot sparks fly out in all directions. The cluster of mud would be compared to the solid core of the sun, but instead of sparks flying, it would be asteroids. Each time the fusion process would occur, asteroids would fly out through the solar system, and some would strike the earth now and then. Eventually, because of gravity, the pieces of the core would clump back together inside the sun, then fusion would set in again exploding the center for more asteroids to be sent through the solar system. This process was repeated till all the solid core was eventually disposed of. That took around 500 million years to complete. The evidence is the craters on the earth's surface. Geologists have dated them to the

time that they struck the planet, leaving a record of how long it took the sun to reach fusion. The result was about 500 million years.

The reason that I think the sun had a solid core is most normal stars start off as a planet from the elements of the protoplanetary Nebula that produced them. Then they grow into a gas giant like Jupiter. Science thinks that Jupiter has a solid core about the size of the earth. Then over the billions of years, the Jupiter size planet will gather more mass and increase in size up to a certain point, then continue to grow in mass but will remain the same size, like compressed gas. Then it will grow into a Red dwarf, then continue to grow till it reaches fusion. It stands to reason that the earth size core will gather more mass as the earth matures. If you could take all the asteroids of the asteroid belt, along with all of the asteroids in orbit throughout our solar system, and pack them all together into a solid ball, to my understanding, that would be the size of the core of the sun when the sun reached fusion. Also add the size of the moon with the asteroids, because the moon evolved from the heart of the sun too. When I use the word "Evolve," remember that everything developed from the laws and design of God, the creator. I think that God created the universe and life by a path of evolution, but not from any scientific theory, but from the description given in the Biblical text. God is a spirit and does not have a solid body. He is super smart and not magic. He is also made up of the physical laws that rule the universe as well as love and a positive way. Keep all of this in mind as you picture God and his creation. Also, keep the Biblical Hebrew and Greek text in mind instead of the translations.

The Fourth Period of Time (Fourth Day KJV)

Five major mass extensions, and about 20 minor mass extensions have occurred over the past 540 million years. Prior to that, there were asteroid impacts but nothing like what happened 540 million years ago when the sun became a star. Therefore, the sun must have had its first explosion about 540-600 million years ago. The chart also shows the temperature of the earth during these impacts. You can see how it sort of matches the impacts. The ocean floor also started to form about 600 million years ago. When you put two and two together, you can get an idea of when the sun reached fusion.

This illustration is one of the series of explosions that happened when the sun reached fusion. This process lasted for about 500 million years or so till the solid core inside the sun was completely gone. The asteroids that hit the earth were

from the solid heart of the sun around 500 million years ago up to the present date. By not knowing that these asteroids came from the core of the sun, science could have mistaken the asteroids impacts, and when they happened. They saw that the elements from the moon were 4.5 billion years old and thought the moon was that age. The core of the sun that exploded was in different aged layers like the earth. In my understanding, they were also in cratons on the surface of the solid core, so, those cratons would have been different ages like the cratons on earth. That could become confusing to someone who didn't know that the moon was created from the core of the sun. Even though the elements were old as the hills, the moon did not form from them until 500-600 million years ago. The entire moon is different ages of rocks and ash throughout its interior. Without the understanding that it came from the core of the sun, it would be a nightmare to try and figure out how it formed.

Science made up a theory of how the earth formed from asteroid impacts. If this had happened, the entire planet would have been sterile, and no life could have happened. We know in our generation that all the planets as well as the sun formed from the protoplanetary Nebula and not asteroids. For some reason, science wants everything to happen from explosions and fire and lava, total chaos. That doesn't fit with the seed and eggs coming from the sea, which is also a theory of science. The asteroid impacts were spaced apart so that the earth would have time to recover between each one. However, the Biblical description does fit with it all, and it is also in the right order step by step. Again, how did the writer know what to write? He was inspired by God, the creator of it all, that's how.

By putting this cosmology together, **entirely on my own**, I did not get sidetracked with other people's ideas. My information came strictly from the ancient Hebrew and Greek text of the Bible and from different articles from different scientists over 30 years. I always wondered why no one volunteered to help, and maybe that was the reason why. It was confusing enough putting all this info together without some bad ideas that sounded rock solid to lead me on a blind detour.

So, all of the above, fit with the scriptures of ***Genesis 1: 15-19 (KJV) And let them be for lights in the firmament of the heaven to give light upon the earth: and it was so. And God made two great lights; the greater light to rule the day, and the lesser light to rule the night: he made the stars also. And God set them in the firmament of the heaven to give light upon the earth, And to rule over the day***

and over the night, and to divide the light from the darkness: and God saw that it was good. And the evening and the morning were the fourth day.

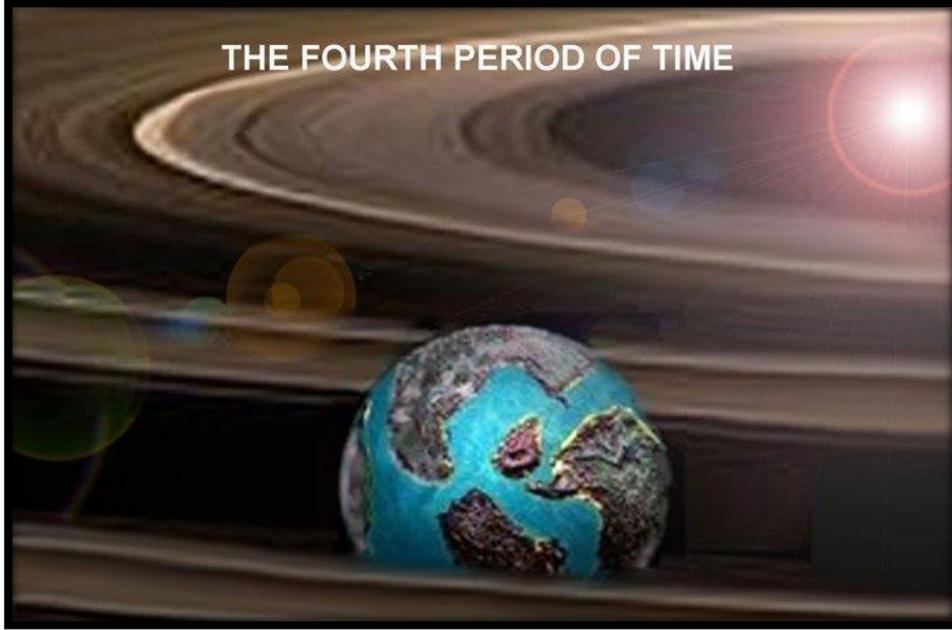

THE FOURTH PERIOD OF TIME

Pangaea was not a continent like science thinks. Pangaea was a small planet earth about 1/3 the size the earth is today. If you trace off the continents on a globe, and paste them on a ball 1/3 the size, they will all fit like a puzzle. That was Pangaea. Look up Neal Adams and the link Science Project. He has some really good animations of the earth growing to size it is today.

(You have to type in the link, this is a photograph)

THE FOURTH PERIOD OF TIME

THE FOURTH PERIOD OF TIME

After the earth was bombarded with asteroids from the solid core of the sun, the elements from the rings would seep between the cracks of the 20 mile thick crust and make their way under the crust to form the mantle of the earth. During the period that the mantle formed, the earth grew one third it's size in just 600 million years. As the mantle grew from the inside of the earth, (Spreading the cracks of the surface), the cracks widened and the sea floors formed. The rings that contained the mantle elements were mostly water, like muddy sea water. The rings thinned out as the earth grew and the sun grew larger from the hydrogen given off in the process of evaporation. Sunlight shown on the surface of the earth, and the population of life exploded. The age of the sea floor is about 600 million years old and only two miles thick.

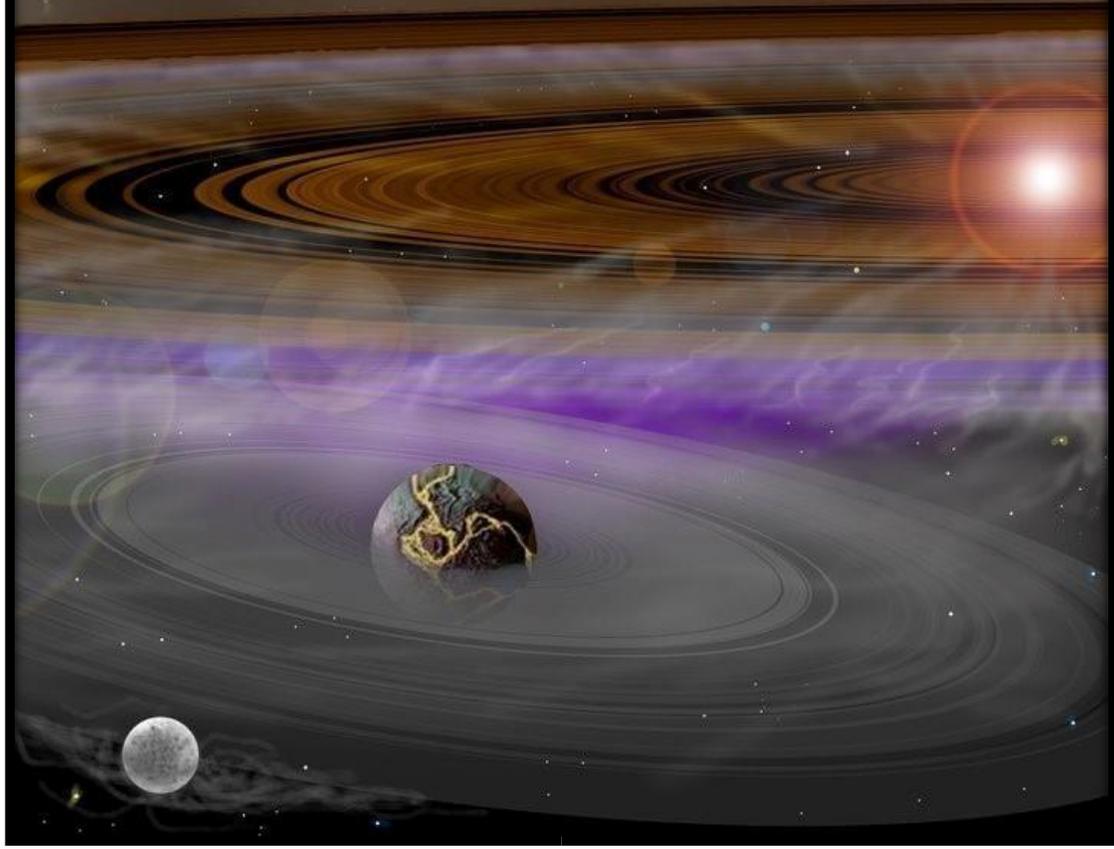

That's why the sea floors are only 1 ½ miles thick while the continents are about 20 miles thick. The continents ended up in the location where they are today, and the rings of protoplanetary Nebula were used up. Once the rings were used up the earth had a mantle to give an excellent even heat to the surface and the sun also heated the surface because there was nothing to block the sunlight anymore. Plants got their light, heat, and even some vitamins from the sun and life on earth flourished. With the newly formed moon to control the tides, marine life filled the seas and migrated to dry land to fill the earth. This was the 500-million-year gap where most of all, life evolved at one time from the seed and egg that was in the

seawater from the design of God. Conditions on the earth changed. The planet earth was now a nursery for life to flourish. And that, it did. They called it the 500 Million Year gap and just about all life sprang forth at one time. Each species according to its own kind just like the Bible teaches. No millions of years for evolution with each species adapting and coming from a common ancestor. All life sprang forth at one time and each species was according to its own kind, and there were no links between them. They were a creation of God, not Chance.

This illustration shows how the earth grew from the inside which made the cracks of Pangaea wider to form our ocean floors.

It also shows how wet steam from the mantle separated in the Ionosphere to become one atom oxygen that was scattered in the solar system and beyond that could have formed the Oort cloud that science THINKS might be outside the orbit of Pluto and beyond. How else could one atom oxygen be present in the universe?

THE FOURTH PERIOD OF TIME

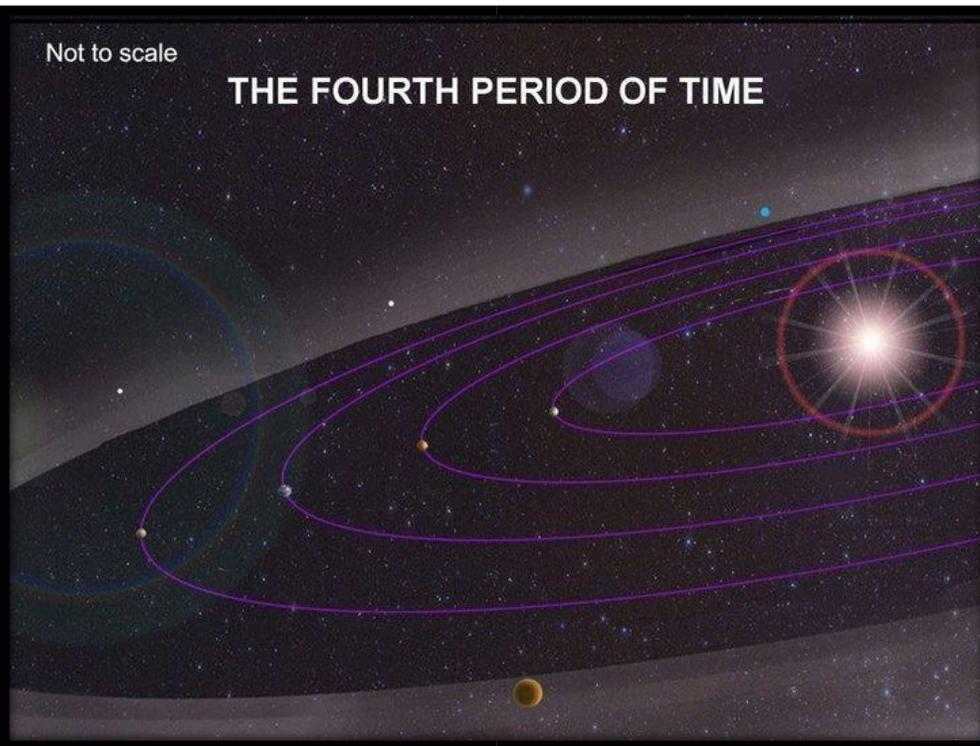

The Fourth Period of Time

After the sun reached fusion, for a period of a million years, asteroids shot out through the solar system from the solid core of the sun. Dust and ash followed each impact on the earth and over time rings started to form around the earth like the rings of Saturn. This dust was a combination between the core of the sun and the elements of the earth. The moon eventually started to form from the dust and ash and give birth to the tides of the ocean. Life started to explode during this period that some call the 500 million year gap. The origins of the moon has been misunderstood for it's age. The core of the sun was 450 Billion years old but the moon was new, just being formed from this dusty old material.

Not to scale

THE FOURTH PERIOD OF TIME

Now let's move on to chapter seven to see what the Bible says about God creating life on earth.
